Education

Auburn University Auburn, AL
Bachelor of Software Engineering *Expected May 2028*

- **President**, Auburn ACM; **Founder & President**, Agentic Programming Club
- **3rd Place**, 2025 ICPC University of West Florida Regional

Experience

Software Engineering Intern August 2026 – Present
OCV, LLC *Opelika, AL*

- Configured 50+ production iOS and Android applications by translating client requirements into JSON-based feature, content, and behavior specifications for native Swift and Kotlin generation.
- Validated 300+ TestFlight and Android builds and shipped 200+ App Store and Google Play releases, resolving functional defects, client changes, and release blockers across multi-team QA cycles.

Undergraduate AI Research Fellow May 2026 – Present
Auburn University *Auburn, AL*

- Built and evaluated a source-grounded RAG system over Auburn CSSE data using semantic retrieval, evidence-based citations and refusals, a 28-question benchmark, and controlled RAG/no-RAG experiments with blinded human review.

Software Engineering Intern August 2025 – December 2025
Tennibot *Auburn, AL*

- Automated Linux provisioning for autonomous robots, reducing setup from multiple hours to minutes, and built Dockerized Ubuntu calibration workflows using RViz and robot sensor tooling.
- Developed Python, OpenCV, and CVAT SDK pipelines supporting annotation of 10,000+ perception images and calibration workflows that improved sensor accuracy by about 5%.

Data Analyst Intern May 2025 – August 2025
Altec *Birmingham, AL*

- Migrated 90+ Qlik analytics assets to Qlik Cloud, optimizing Qlik and SQL models across 13M+ rows to cut memory use 32%, maintain sub-second dashboards, and standardize analytics with JSON/CSS themes.

Projects

RampLab | *C++, ROS 2, CMake, A* Routing, Digital Twins* August 2026 - Present

- Built a deterministic airport ground-operations simulator with A* routing, concurrent vehicle and aircraft workflows, disruption recovery, safety logic, ROS 2 integration, and KAUO digital-twin operations.
- Validated deterministic and safety behavior with 237/237 CTest cases, seeded experiment sweeps, serial/parallel parity checks, and reproducible evidence bundles.

Prediction Market Intelligence Platform | *TypeScript, PostgreSQL, Prisma, Next.js* June 2026

- Built a market-microstructure research platform ingesting Kalshi order-book data and ran 50,000-snapshot passive-fill execution simulations backed by 240+ automated tests.

Auburn Market | *React Native, Expo, TypeScript, PostgreSQL, Supabase* May 2026 - Present

- Designed, built, and shipped an iOS marketplace for Auburn students with listings, housing, messaging, search, and moderation; won $1,000 at Auburn Idea Jam.

JudgeLock | *TypeScript, Node.js, Git, CI* July 2026

- Published an npm CLI enforcing deterministic policies on agentic coding workflows; passed a 40/40 benchmark covering 30 adversarial attacks and 10 legitimate controls across Windows and Linux.

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, C++, SQL, Bash
Frameworks/Libraries: React Native, Expo, Next.js, React, Node.js, Express, Spring, Pandas, OpenCV, Tailwind, Vitest
Data and Systems: PostgreSQL, MongoDB, Snowflake, Prisma, Docker, Linux, ROS 2, REST APIs
Developer Tools: Git, Supabase, Firebase, Vercel, Railway, CVAT, RViz, Viam, Expo EAS, RevenueCat
