EDUCATION

Auburn University

Bachelor of Software Engineering

Auburn, AL

Expected May 2028

- President of Auburn ACM and Founder/ President of the Agentic Programming Club
- 3rd Place at the 2025 ICPC University of West Florida Regional
- Undergraduate AI Research Fellow: Human-Computer Interaction

EXPERIENCE

Software Engineering Intern

August 2025 – December 2025

Tennibot

Auburn, AL

- Automated Linux provisioning for autonomous robots, covering microSD imaging, filesystem setup, and secure cloud registration, reducing manual setup from multi-hour work to a repeatable minute-scale workflow.
- Built Dockerized Ubuntu 22.04 calibration workflows with RViz and robot sensor scripts to make camera and rotation calibration reproducible across deployments.
- Developed Python, OpenCV, and CVAT SDK data pipelines to extract video frames, upload datasets, and support annotation of 10,000+ training images for perception model development.

Data Analyst Intern

May 2025 – August 2025

Altec

Birmingham, AL

- Optimized Qlik and SQL data models over 13M-row datasets, reducing memory footprint by 32% while keeping dashboard response times under one second.
- Migrated 90+ legacy Qlik analytics assets to Qlik Cloud, rebuilding data models and validating dashboard outputs with BI stakeholders.
- Built custom JSON/CSS Qlik themes and configured AI Insight Advisor business logic to standardize client-facing analytics workflows.

Data Analyst Intern

May 2024 – August 2024

iHICA! (Hispanic and Immigrant Center of Alabama)

Homewood, AL

- Designed normalized relational database schema consolidating 20+ years of legacy program data into a scalable reporting foundation.
- Built Tableau dashboards tracking outreach, program outcomes, and service metrics, giving staff a central view of community impact data.

PROJECTS

EventFilm | *React Native, Expo, TypeScript, Node.js, PostgreSQL, Supabase, Express.js, RevenueCat* [App Store](#) | [Website](#)

- Designed, built, and launched EventFilm on the iOS App Store and web in one summer, enabling hosts to collect candid event photos in a shared album through a link while guests contribute without accounts or app downloads.
- Engineered the production iOS and web stack using React Native, Expo, TypeScript, Node.js, PostgreSQL, Supabase object storage, and RevenueCat; delivered host authentication, content moderation, event controls, curated highlights, and Vercel/Railway deployments.

Prediction Market Intelligence Platform | *TypeScript, Next.js, Prisma, PostgreSQL, Kalshi API, Vitest* [GitHub](#)

- Built a market research platform that ingests Kalshi market and order book snapshots, normalizes pricing data, and evaluates signal quality with forward return and cohort analysis.
- Implemented research modules for binary arbitrage, related market grouping, spread tightening, passive quote markout, and fill proxy behavior to test whether paper edges survived execution constraints.
- Added 240+ passing tests and ran 50,000-snapshot passive-fill simulations, surfacing low fillability as the key bottleneck despite favorable markouts.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, Bash

Frameworks/Libraries: React Native, Expo, Next.js, React, Node.js, Express, Spring, Pandas, OpenCV, Tailwind, Vitest

Data and Systems: PostgreSQL, MongoDB, Snowflake, Prisma, Docker, Linux, REST APIs, Kalshi API

Developer Tools: Git, Expo EAS, RevenueCat, CVAT, RViz, Viam, Supabase, Firebase, Vercel, Railway
